EDUCATION

Indian Institute of Technology Patna <i>Bachelor of Technology in Electronics and Communication Engineering</i>	7.89 CGPA Aug 2024 – May 2028 (Expected)
Pace Junior Science College, Andheri <i>Class XII, HSC</i>	88.5% Jun 2022 – Mar 2024
Lokhandwala Foundation School <i>Class X, ICSE</i>	98.2% Jun 2011 – May 2022

EXPERIENCE

GreyLabs AI Certificate <i>Summer Intern - Engineering</i>	Bengaluru, India May 2026 – Jul 2026
- Designed and optimized prompt pipelines for LLM-powered voice agents across BFSI workflows, including KYC completion, collections, and customer onboarding. Improved AI audit accuracy by 30%+ by refining evaluation prompts, defining robust assessment criteria, and validating outputs against manual auditor reviews. - Analyzed 1,000+ customer interactions to identify prompt failures, conversation bottlenecks, and optimization opportunities for AI agents. - Tailored AI voice agent and conversation analytics workflows to client-specific business objectives, compliance requirements, and operational processes.	

PROJECTS

Uncertain – The Uncertainty-Aware Programming Language Code PyPI Package <i>Python, NumPy, Pytest, Hypothesis</i>	Aug 2026 – Present
- Built Uncertain, a statically-typed DSL/compiler that catches distributional-uncertainty correlation bugs at compile time, supporting 11 statistical distributions. - Implemented compile-time diagnostics for unsafe variable reuse and math-domain errors, verified with thousands of fuzz-tested inputs and Monte Carlo cross-validation. - Published as an installable PyPI package (uncertain-lang) with a CLI tool, shipping 12+ releases.	
ParkSight – Parking Congestion Enforcement Intelligence (Flipkart Gridlock 2.0) Code Deployed Link <i>Python, FastAPI, React.js, TypeScript, Machine Learning</i>	Jun 2026 – Jun 2026
- Architected an AI-powered traffic analytics platform that analyzes 298,000+ traffic and violation records, transforming them into actionable insights through predictive hotspot detection and geospatial analysis. - Developed graph-based route optimization and patrol simulation modules to optimize enforcement efficiency and resource allocation across urban road networks. - Created interactive dashboards for traffic heatmaps, offender tracking, station-level monitoring and historical trend visualization, enabling data-driven decision-making.	
Feather – The AI Editor of 2030 (Inter IIT Tech Meet 14.0) Code Documentation <i>Python, SDXL, AutoGen, OpenRouter, OpenCV, FastAPI, Modal</i>	Nov 2025 – Dec 2025
- Architected a human-in-the-loop AI editing system combining LLM-based intent understanding with diffusion-based image transformation within a ≤12 GB VRAM limit. - Programmed Smart Adjust, an interactive semantic editing pipeline that uses a Vision-Language Model feedback loop to convert high-level user intent (mood, lighting, tone, atmosphere) into structured, deterministic image transformations across 25+ custom OpenCV filters, eliminating the need for manual prompt engineering. - Built Match Art Style, a reference-guided style transfer system using AutoGen framework to orchestrate Socratic conversations between an artist-persona LLM and an SDXL agent, ensuring outputs adhered to strict formal and iconographic art principles. - Deployed the SDXL diffusion model alongside the multi-agent orchestration layer, achieving highly reliable style transfers through Retrieval-Augmented Generation (RAG) based on art-historical knowledge documents rather than traditional weight fine-tuning.	
Ingres – An AI Virtual Assistant for Groundwater Data (Smart India Hackathon 2025) Code Deployed Link <i>Gemini Flash, Node.js, Express, ChromaDB, PostgreSQL, React.js, Chart.js</i>	Oct 2025 – Nov 2025
- Engineered a Text-to-SQL pipeline backed by Retrieval-Augmented Generation (RAG), leveraging 768-dimensional vector embeddings for semantic retrieval to convert complex user queries into executable SQL for reliable, domain-specific groundwater data access. - Added multilingual query support across 12 languages, enabling groundwater data access across multiple languages for regional stakeholders. - Integrated post-processing and visualization, converting raw SQL outputs into readable summaries, tables and charts, enhancing user comprehension and decision-readiness for planners and policymakers.	

SKILLS

Technologies: C, C++, Java, Python, Spring Boot, JavaScript, HTML, CSS, React.js, TypeScript, Node.js, Express, SQL, FastAPI, Postman, Git, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)
Coursework: Data Structure, Foundations of Programming, Probability Theory and Ordinary Differential Equations, Calculus and Linear Algebra, Computer Organization and Architecture, Computer Graphics, Internet of Things
Leadership: NJACK (Coding Club) IIT Patna Development & Open-Source Coordinator, E-Cell IIT Patna Web Development & Tech Head

ACHIEVEMENTS

Represented IIT Patna at Inter IIT Tech Meet 14.0 , securing 8th place among 23 participating IITs in the Adobe Problem Statement.	
Ranked 28th among 2,500+ registered teams in AlgoUtsav 2026, qualifying for the offline round.	Certificate
Finalist in Droidrun DevSprint 2026, placing among the top 20 of 1,100+ participating teams .	Certificate
Reached the semi-finals of Flipkart Gridlock 2.0, finishing in the top 1,600 of 35,000+ participating teams .	Selection Mail
Semi-finalist in Flipkart Grid 8.0 among 1,65,000+ participants .	Selection Mail
Achieved a global rank of 132 in CodeChef Starters 218 (Div. 4) among 18,000+ active participants.	Leaderboard
Specialist on Codeforces with a maximum rating of 1458 .	Codeforces Profile
Solved 1,000+ problems on top coding platforms.	
Completed the Google Student Upskilling Launchpad program (Jul 2025).	Certificate
Secured AIR 5098 in JEE Advanced 2024 among 180,000+ candidates.	

EXTRA-CURRICULAR

Won best speaker at Mumbai Toastmasters during summer break.	
Volunteered in Seva Sahayog Foundation, teaching underprivileged children.	Certificate
